

Technical Skills

Languages: Java, C/C++, JavaScript, HTML, CSS, Python, PostgreSQL, Swift, XML, Rust

Framework: React, Spring Boot

Tools: Postman, MySQL Workbench, Github, Launch Darkly, Datadog, Windsurf, Claude Code

Computer: MS Windows, MS Office Suites, Adobe CC Suites, Google G-Suite, AWS, Azure

Experiences

Optum Technologies – Software Engineer

June 2021 – Present

- Monitor poor system performance, investigate and address root cause with minimal member impact.
- Implemented JWT tokenization in myUHC app for background data syncing to improve NPS score.
- Configured Dependabot, Policy Bot, and Bulldozer to proactively manage dependencies, and enforce security protocols, enhancing application security and development efficiency.
- Designed and implemented proof of concepts (POCs) for automating certificates and secrets in backend systems, reducing manual toil for developers and enhancing security compliance.
- Engaged with external teams to assess system capabilities, foster collaboration, and proactively address identified system issues, ensuring seamless integration and operational efficiency.
- Plan and host events for early-career developers in the Boston office, fostering engagement with colleagues, facilitating peer learning and strengthening professional development.

UMass Amherst CICS – Undergraduate Course Assistant, Amherst MA

Sept 2019 – May 2021

- Graded students' homework and exams on a weekly basis in a ~250 student core CS course.
- Held office hours weekly to answer students' questions and concerns about CS concepts and projects.
- Assisted in running a lab section weekly that consists of around 40 students.

Braintree Public Schools – IT Technician, Braintree MA

Oct 2015 – June 2021

- Developed Arduino system to automatically enroll Chromebooks into Google G-Suite with minimal staff intervention. Tested in 2019 on ~100 Chromebook enrollments.
- Managed Windows PC, Google products, Apple electronics, and Epson projectors using SCCM, AD, Lightspeed Systems, or HelpDesk to support technologies that faculties use district wide.
- Assisted in implementing Bring-Your-Own-Device (BYOD) plans at Braintree High School to increase access to technology using Cloudpath and support 1300+ connected student devices.

Optum Technologies – Technology Development Program Intern

June 2020 – Aug 2020

- Planned and developed data delivery service using Spark Streaming for plan configuration analysis and presentation.
- Built web application using Rest API to demonstrate a particular use case scenario as a side project.
- Prepared bi-weekly presentations to update colleagues on progress on project.

Projects

Ultimate Software: Enterprise Organization Chart

Sept 2020 – Dec 2020

- Managed a scrum team of undergrad students developing an org chart web app using latest tech stack including MongoDB, React, and AWS.

Ultimate Software: Employee Perception Application

Sept 2019 – Dec 2019

- Developed an anonymous enterprise surveying system for company internal employees using Agile/Scrum practices.

UMass Study App

Dec 2019

- Prototyped ideal study app for UMass students through waterfall development practices and HCI values.

2019 UMass Hackathon – Space Lapse

Oct 2019

- Integrated website with Raspberry Pi to capture pictures and stitch together a GIF.

2018 UMass Hackathon – Arduino Security System

Oct 2018

- Conceptualized a modern UI design using Java to allow control of security hardware on a mobile app.

Education

University of Massachusetts Amherst

- Bachelor of Science, Computer Science with great distinction
- Bachelor of Science, Computational Mathematics with great distinction
